

# Country fact sheet: Netherlands

## 1. Total greenhouse gas emissions

Figure 1: Left hand side: Total greenhouse gas emissions (excl. international aviation) 1990-2018 (index 1990 = 100 %). Right hand side: Greenhouse gas emissions by sector<sup>1</sup> – historical emissions 1990-2017, projections 2018-2030 (Mt CO<sub>2</sub>-eq).

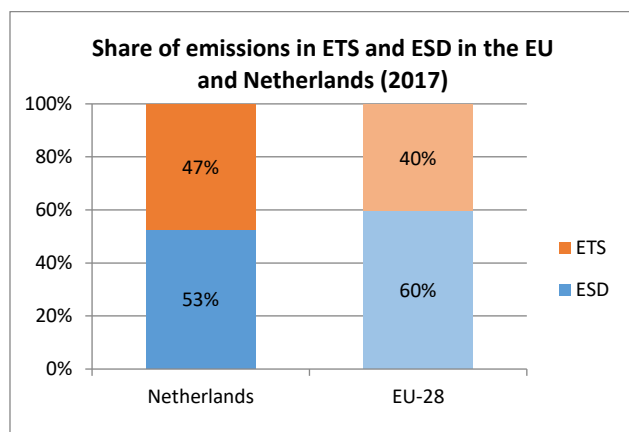

Figure 2: Share of emissions covered by the ETS and the ESD (2017).<sup>2</sup>

<sup>1</sup> The sectors in the figure correspond to the following IPCC sectors: Energy supply: 1A1, 1B and 1C. Energy use in manufacturing industries: 1A2. Industrial processes and product use: 2. Transport: 1A3. Other energy use: 1A4, 1A5 and 6. Agriculture: 3. Waste: 5. International aviation: memo item.

<sup>2</sup> Excluding international aviation, CO<sub>2</sub> from domestic aviation and NF<sub>3</sub>.

## 2. ETS emissions

Figure 3: ETS emissions 2005-2018 (Mt CO<sub>2</sub>-eq).<sup>3</sup>

## 3. Emissions in Effort Sharing sectors

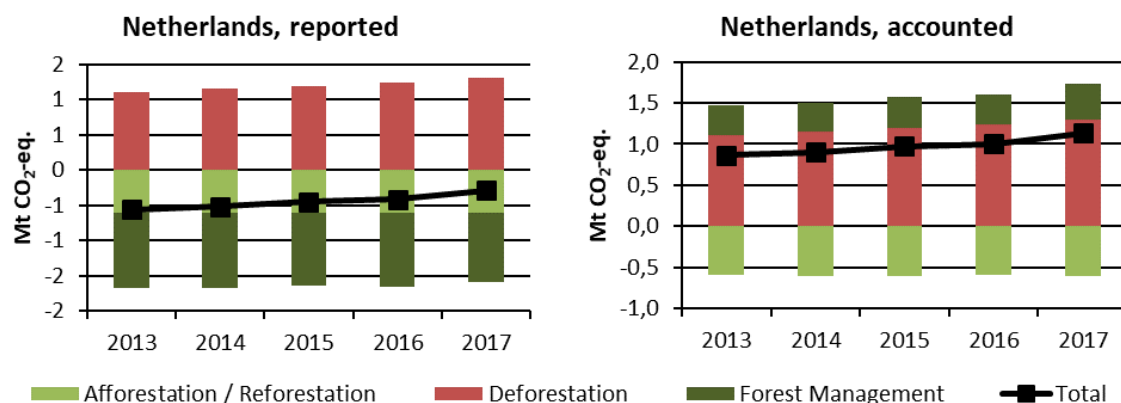

Figure 4: Left hand side: Emissions and targets under the Effort Sharing Decision/ Effort Sharing Regulation 2018, 2020 and 2030 as percentage change from 2005. Right hand side: Emissions, annual emission allocations (AEAs) and accumulated surplus/ deficit of AEAs under the Effort Sharing Decision 2013-2020 (Mt CO<sub>2</sub>-eq).

<sup>3</sup> The scope of ETS was extended from 2013. To reflect the current scope of ETS, estimates made by EEA are included in the figures from 2005 to 2012. The estimates cover only emissions from stationary installations.

## 4. Land use, land use change and forestry

**Figure 5: Reported and accounted emissions and removals from LULUCF (Mt CO<sub>2</sub>-eq.)<sup>4</sup>**

Reported quantities under the Kyoto Protocol for the Netherlands show net removals of, on average, -0.5 Mt CO<sub>2</sub>-eq for the period 2013 to 2017. In this regard, the Netherlands contribute with 0.1% to the annual average sink of -411.9 Mt CO<sub>2</sub>-eq of the EU-28. Accounting for the same period depicts net debits of, on average, 1.0 Mt CO<sub>2</sub>-eq, which represents -0.9% of the EU-28 accounted sink of -111.9 Mt CO<sub>2</sub>-eq. The Netherlands is one of ten EU Member States that show net debits in this preliminary accounting exercise. Reported net removals show a declining trend and accounted net debits an increasing tendency over the five-year period.

Highest reported quantities are emissions by Deforestation and removals by Forest Management. Emissions by Deforestation appear to be having a rising trend. Removals by Afforestation/Reforestation remain stable and make up a sizable part of the emission budget of the LULUCF sector.

Debits by Deforestation are the biggest accounting quantity and rising, followed by stable credits by Afforestation/Reforestation. The Netherlands is one of twelve EU Member States with debits by Forest Management, which show relatively unchanged quantities over the five-year period.

<sup>4</sup> The differences between reported and accounted emissions from LULUCF under the Kyoto Protocol are described in the 'explanatory note on LULUCF – accounted and reported quantities under the Kyoto Protocol'.

## Data sources

Figure 1: Annual European Union greenhouse gas inventory 1990–2017 (EEA greenhouse gas data viewer: <https://www.eea.europa.eu/data-and-maps/data/data-viewers/greenhouse-gases-viewer> ). *Approximated EU greenhouse gas inventory 2017* (European Environment Agency). Member States national projections, reviewed by the European Environment Agency.

Figure 2: Verified ETS emissions abstracted from European Union Transaction Log 21.10.2019 (EEA ETS data viewer: <https://www.eea.europa.eu/data-and-maps/dashboards/emissions-trading-viewer-1>). ESD data from European Commission: *Commission Implementing Decision (EU) on greenhouse gas emissions for each Member State for the year 2017 covered by Decision No 406/2009/EC of the European Parliament and of the Council* (forthcoming).
