RE: **WORK PLAN APPROVAL**
      Case No. 2006-0303-BA
      Former Exxon R/S No. 2-8077
      14258 Jarrettsville Pike, Phoenix
      Baltimore County, Maryland

Dear Mr. Bozeman:

The Maryland Department of the Environment's (the Department) Oil Control Program recently completed a review of the *Supply Well Investigation Work Plan for 3627A Southside Avenue*, dated January 20, 2017, which proposes to investigate well construction using a downhole camera, identify fractures at the open hole portions of the well via geophysics, and perform discrete zone sampling via HydraSleeve ™ methodology during a second mobilization. The Department approves the scope of work as outlined in the *Work Plan* with the following clarification. If the investigation identifies well construction as open borehole with no plastic screen present, packer testing may be required pursuant to the Department's November 10, 2016 letter. A report summarizing the findings of the geophysical investigations must be submitted to the Department no later than 45 days following completion of the geophysical field investigation and include a proposal for the discrete zone sampling/packer testing intervals.

Please notify the Department when a schedule has been set with the homeowner and at least five (5) days prior to conducting field activities. If you have any questions, please contact the case manager, Ms. Ellen Jackson at 410-537-3482 or via email at ellen.jackson@maryland.gov.

Sincerely,

Andrew B. Miller, Chief
Remediation and State-Lead Division
Oil Control Program
