StayHere Hotel Chooses Omada for Reliable Business Wi-Fi

Stay here

❧ END-CUSTOMER GENERAL PROFILE

Name: StayHere

Industry: Hospitality

Capacity: 40–46 apartments per site

Location: Morocco (Casablanca: 5 sites, Rabat: 6 sites, Agadir: 1 site)

❧ Used Products：

• Omada Access Points：
168× EAP245 (Ceiling Mount Accesss Point)

• Omada Switches：
12× SG2428P (PoE Switch)

• Omada Controller:
12× OC200

❧ BACKGROUND

StayHere, founded in 2020, excels in short to medium-term real estate rentals, offering modern, hotel-quality accommodations in Morocco's major cities.

Their main mission is revolutionizing the hospitality sector by facilitating access to elegant, high-tech accommodations while honoring a heritage of Moroccan hospitality.

❧ CHALLENGE

Recognizing guests' need for fast, reliable Wi-Fi, the hotel aimed to deliver a secure network that caters to all requirements, with centralized IT management accessible locally or remotely for monitoring, configuration, and maintenance as needed.

The hotel's primary challenge was an inability in installing dedicated access points in each apartment suite, opting instead for corridor-only access points that needed to efficiently cover two suites each.

❧ SOLUTION

The TP-Link Omada solution provided a response to this need with centralized management. 12 sites across Morocco deployed the Omada networking solution. Each site is now composed of:

- EAP245 Omada Ceiling Mount Access Point（168× EAP245 for all sites）

- SG2428P Omada PoE Switch (12× SG2428P for all sites)

- OC200 Omada Hardware Controllers (12× OC200 for all sites)
