

European Nuclear Safety Regulators Group

Stakeholder engagement plan for TPR

Patrick Majerus

ENSREG WG3 (transparency) Chair

Topical Peer Review

ENSREG WP 2021-2023

Task: Elaborate the process for public involvement within the ENSREG 2nd Topical Peer Review.

Aim: The aim of the work will include broader participation within the various stakeholder groups and a more proactive communication exchange with stakeholders.

The general public

Stakeholder groups

General consideration

Engagement with stakeholders is to enrich the process by collecting relevant contributions. It implies a two-way dialogue.

Engagement with the general public helps to inform the public.

Development of a stakeholder involvement plan

- WG3 proposes that the new stakeholder involvement plan should :
 - follow an integrated strategy for stakeholder involvement and public information;
 - allow for a graded approach;
 - Take into account that the 2nd TPR relates to different types of installations, including NPP's, research reactors, other nuclear installations and waste storage facilities;

Information material

- Development of 3 factsheets:
 1. Description of the TPR-Process in general
 2. Conduct and outcome of TPR-1
 3. Explanation on the topic selected for TPR-2

How: Each factsheet should contain clear factual messages, easy to understand, not exceed +/- 2 pages, including graphics;

When: First draft to be produced by June 2021;

What for: Communication with the media;
Published on the ENSREG website;
Translated by national regulators into own language;
Posted on social media accounts of national regulators;

Engagement with stakeholder groups

- Organisation of a first stakeholder meeting

- How:** Organize an agenda - invite to a virtual meeting;
- When:** Meeting in June 2021
- Why:** Engagement with stakeholders allows to present the TPR-2 at a relatively early stage and to collect feedback
- Outcome:** Feedback used to inform the TS, TOR and SEP.

Engagement with stakeholders

- Set up of a TPR Focus Group
(standing stakeholder group with focus on TPR)

- How:** Balanced composition (e.g. nuclear experts, NGOs, topic experts).
- Durability:** Mandate that covers the whole TPR2 process and may be extended to TPR3;
- When:** TBD
- Why:** Foster actual participation and collect relevant contributions;
Increase knowledge about TPR among stakeholder groups, make good use of it in TPR – 3 and other possible stakeholder involvement processes;
Ensure continuity in stakeholder involvement;

Further stakeholder engagement

Opportunities for stakeholder engagement:

- Stakeholder/Public consultation on draft documents (e.g.: technical specifications);
- Guidance for national regulators to promote the TPR within their countries;
- Stakeholder involvement in the peer review phase;
- Transparency of the final report.
