

**Priority question for written answer P-001642/2023
to the Commission**

Rule 138

Gheorghe Falcă (PPE)

Subject: EU electricity bills and financial incentives

In some EU Member States, measures to reduce electricity bills centre on electricity suppliers. Suppliers are required to send their customers reduced bills and then apply for the difference from the authorities. However, this type of system sometimes generates a serious lack of liquidity.

Does the Commission have any financial mechanisms that could be used to mitigate this cash-flow problem?
