

Simple and Effective Cybersecurity for Small Businesses

Enterprise-Grade Protection and Performance without Complexity or Cost

With cybercriminals stepping up attacks on small businesses, you need simple and effective cybersecurity that you can count on to just work. Fortinet consolidates security and networking by integrating next-generation firewalls (NGFWs) with switches and access points (APs) to deliver better protection and easier management. Our cloud management service allows you to centralize management, saving time and resources.

FortiGate Next-Generation Firewall: The World's Most Deployed Network Firewall

FortiGates deliver unparalleled protection and performance to safeguard your mission-critical networks without increasing complexity or expense. They inspect and control all of your network's inbound and outbound traffic. Key functions include intrusion prevention system, deep-packet inspection, advanced malware protection, and application control. FortiGates also include a wireless controller and SD-WAN at no extra cost.

FortiSwitch and FortiAP: Secure and Consistent Network Connectivity

Fortinet offers a rich portfolio of switches and wireless access points that seamlessly integrate with FortiGate, allowing for basic network access control (NAC) to securely onboard devices as they connect. FortiSwitch, featuring port speeds from 1 Gbps to 10 Gbps, and FortiAP, featuring the latest Wi-Fi 7 technology, can leverage FortiGate as a wireless controller.

FortiGuard AI-Powered Security Services: Proven Threat Intelligence

FortiGuard AI-Powered Security Services integrates with FortiGate and other security solutions across Fortinet's broad portfolio to provide market-leading security capabilities that protect applications, content, web traffic, devices, and users located anywhere. Available a la carte or in bundles, these services deliver real-time updates, protecting you against even the latest threats.

FortiGate Cloud: Simplified Management and Analytics

FortiGate Cloud is a cloud-based service that simplifies network operations by providing centralized management for FortiGates and other Fortinet devices, such as FortiSwitches and FortiAPs. With enterprise-grade visibility and analytics, FortiGate Cloud lets you manage IT devices efficiently and reduce cyber risk.

FortiConverter Service: Easy Migration to FortiGate

The FortiConverter Service accelerates your transition from legacy firewalls to FortiGate NGFWs. The service employs best practices by using proven methodologies and validation to reduce human error, limiting the negative impact on your business operations.
