Training Institute Highlights

What having an NSE 8 certification can do for your career

"Every single level in the Fortinet NSE Certification program is essential, and it all culminates up to level 8, which is the highest level. The certification and training also allowed me to work with more prestigious customers and has earned me a leadership role within Switchshop." Luke Titmus, Director of Engineering Services, Switchshop

Growing the future cybersecurity workforce

Research from FortiGuard Labs revealed that ransomware attacks increased tenfold in 2021. With more companies adopting a hybrid workforce, advanced security products and networks are needed but the biggest challenge is finding the skilled professionals to support these networks. Read more on how Fortinet is working to reduce the cybersecurity skills gap with our various programs and initiatives.

Break the Bias! Diversity in the Cybersecurity Workforce

Cybersecurity is one of the industries still struggling with significant bias and gender stereotypes. Outside of the high-tech sector, women account for 47.7% of the global workforce, yet in the cybersecurity industry women only make up 25% of the workforce. Find out the three top reasons why this is and what we can do to change things.

Fortinet wins two more awards for Cybersecurity Training Programs

The votes are in, and Fortinet has been named a Gold Winner in the 2022 Cybersecurity Excellence Awards and a Silver Winner in the 2022 Globee Awards. Both awards are based on our NSE certification program, as well as the programs we have developed to support women, veterans and minorities.

Threat Predictions from FortiGuard Labs 2H 2021 Report

Threat intelligence from the second half of 2021 reveals an increase in the automation and speed of attacks demonstrating more advanced persistent cybercrime strategies that are more destructive and unpredictable. Read more about the following key topics in our second half FortiGuard Labs report.

- Log4j Demonstrates the Speed of Exploits
- Adversaries Rapidly Targeting New Vectors – Linux
- Ransomware Attacks Remain Relentless
- Deeper Understanding of Attack Techniques Stops Criminals Faster
