

CatDV Advanced Panel *for* **Adobe® Creative Cloud® Applications** **Release Notes**

Thank you for downloading CatDV Advanced Panel for Adobe® Creative Cloud® Applications.

This panel provides the facility to search CatDV Server for assets from within any supported Adobe Create Cloud Application, and import the selected assets into the current project.

Supported applications are:

- Adobe Premiere®
- Adobe After Effects®
- Adobe Illustrator®
- Adobe Photoshop® (Up to version 24 on Mac)
- Adobe In Design® (Up to version 18 on Mac)

This is designed for use with a CatDV Workgroup, Enterprise or Pegasus Server licenses. See below for details of licensing requirements.

Version History

6.1.4 (12th Sept 2024)

Fix issue with remote working with audio and still images.

6.1.3 (15th Dec 2023)

Updated certificate.

6.1.2 (17th Aug 2023)

Fix issue saving/loading settings on some Mac OS versions.

6.1.1 (22nd Jun 2023)

Fix issue looking proxies that use the new proxy naming convention (with both the original and proxy extensions).

6.1.0 (24th Jan 2023)

Add support for new "Markers Panel" and "Linked Clips" fields plus various other minor enhancements and fixes.

6.0.8 (23rd Jan 2023)

Fix issue where could display recent clips, even when 'Show Recent Clips' workspace setting was set to false.

6.0.7 (9th Sept 2022)

Fix security issue with SAML login using external browser.

6.0.6 (1st Sept 2022)

Cmd-A now selects all clips in a result set.

6.0.5 (30th Aug 2022)

Fix issue mapping audio file paths.

6.0.4 (19th Aug 2022)

Add support for new 'Not Set' filters (requires Server 10.1.2 or later)

6.0.3 (19th Aug 2022)

Fix error when checking in certain complex project files. Fix non-file assets being checked into CatDV as clips.

6.0.2 (1st July 2022)

Fix issue with importing files with certain unusual characters in their paths..

6.0.1 (21st June 2022)

Fix issue with importing user fields into the Premiere project.

6.0.0 (9th May 2022)

Updated with latest Server 10 features such as folders, which allow clips to be organised into separate folders within a catalog as well as playlists and version sets. Adds support for browse by metadata and new review and approve workflows. Also supports new browser-based SAML login process.

5.8.0 (16th March 2022)

Fix issue where checking in a previously checked in project, that has subsequently been deleted on the server, could link project items to clips in the recycle bin.

5.7.0 (14th Oct 2021)

Add support for setting a path to media on shared storage as mounted on the local client, which should make configuration in mixed platform environments simpler and avoid having to configure numerous client paths in the server media stores.

Fix issue with punctuation in asset file paths.

5.6.9 (7th Sept 2021)

Fix issue where panel was not remembering things like last used credentials across panel or CC application updates. Also fix issue where splitter positions not correctly set on first load.

5.6.8 (2nd Aug 2021)

Fix check-out history not being updated correctly when project that already exists on the server is checked-in.

5.6.7 (30th July 2021)

Fix issue when checking out a project that is already open in Premiere (changes in checked out project were not applied) .

5.6.6 (23rd July 2021)

Fix issue when checking in projects to the server while remote working enabled, which could lead to duplicated projects in CatDV.

5.6.5 (15th July 2021)

Fix issue when using "Edit Mode" where edit buttons were not available. Fix error when editing read-only clips .

5.6.4 (26th May 2021)

Fix issue where Workspace Settings were not being loaded if logging in using SAML.

5.6.3 (26th May 2021)

Add support for UI Scripts. Fix issue with log in process is server supports anonymous access.

5.6.2 (18th Feb 2021)

Fix issue with local path mapping resulting in duplicated path separators under certain conditions. Improve error handling in remote working subsystem under various network failure conditions.

5.6.1 (2nd Feb 2021)

Improved searching for multi-select fields in both search forms and query builder. Fix issue with group-selector picklist in create catalog, smart folder and clip list forms.

5.6.0 (15^h Jan 2021)

Hi-res path lookups now occur in the panel, rather than on the server, enabling multiple Adobe media paths to be defined for a given client platform. Simplify the import function by removing the separate "Import Hi-res" and "Import Proxy" options, since the panel always imports both hi-res and proxy media (if available) so the options are redundant and misleading.

5.5.4 (11^h Jan 2021)

Re-issued with updated code-signing certificate.

5.5.3 (4th Dec 2020)

Fix issue with Okta login.

5.5.2 (20th Nov 2020)

Several related fixes to improve remote working:

- Fix proxy linking issues in mixed platform environments by moving path mapping logic from the server to the plugin, which can directly probe local file system to ensure correct mappings used.
- Resolve issue locating the server clips that represents the current Premiere project where the project file had been duplicated locally.
- Fix various issues relating to checking in projects.
- Add support for assets that do not support attach proxy (audio, stills etc.) - update main media path to point to local cache file.

5.5.1 (19th Oct 2020)

Fix issue with paging in clip grid view.

5.5.0 (31st Jul 2020)

If an imported clip already exists in the project, update markers and metadata on the existing clip. Add support for mouse-over scrubbing of thumbnails. Add settings to control whether check-in should push markers etc. back to server. Numerous other minor fixes.

5.5.0b1 (6th Jul 2020)

Integrates existing check-in/check-out functionality with the new remote working capabilities. This brings bidirectional synchronisation of metadata and markers to both remote working and local workflows. New "Attach Proxies" command extends downloading and linking to proxy media capability to projects not managed by CatDV.

5.0.0 (17th Apr 2020)

Introduces support for remote working:

- Premiere projects can be published to a remote CatDV Server, which uploads the project file and any local media files to a selected catalog on the CatDV Server.

- Subsequently, when a project is loaded from CatDV Server, it is downloaded to a local cache on the editor's workstation, along with proxies of all the media files contained in the project, and the asset's proxy paths are linked to the locally cached proxies.
- By leveraging Premiere's proxy workflow the assets will automatically be relinked to the original hi-res media when the project is rendered on a machine with access to the hi-res storage.

4.1.6 (30th Jan 2020)

Fix issue with incorrect select button colours.

4.1.5 (25th Sep 2019)

Fix intermittent error during check-in.

4.1.4 (14th Aug 2019)

Fix import error when user does not have edit permission on imported clips.

4.1.3 (13th Aug 2019)

Fix import error with certain versions of Premiere.

4.1.2 (7th Aug 2019)

Fix error when connecting to older servers.

Fix issue checking in audio files.

4.1.1 (12th July 2019)

Allow connect to be cancelled if can't connect to server.

4.1.0 (24th June 2019)

Add support for SAML authentication.

Add responsive player controls.

Make theme more consistently dark.

Fix bug where panels could shrink to zero size on startup.

Fix bug where proxy path not set if clip deleted and re-imported.

4.0.0 (5th Apr 2019)

First public release of check-in/check-out functionality.

3.2.3 (6 Mar 2019)

Fix proxy playback issue.

3.2.2 (6 Mar 2019)

Fix several compatibility issues with Server 7.3 and earlier.

3.2.1 (22 Feb 2019)

Fix issue with navigation trees not expanding and collapsing correctly.

3.2.0 (14 Dec 2018)

Improved marker/subclip handling. (Selecting marker sets current in/out point and create subclips directly from markers tab)

Adjustable column widths.

3.1.0 (18 May 2018)

Add support for Premiere Proxy workflow. Add support for InDesign.

3.0.6 (15 Jan 2018)

Add support for Photoshop and Illustrator. Fix issue transferring metadata on Mac.

3.0.5 (15 Dec 2017)

Change layout to details above list. Update code signing certificate.

3.0.4 (9 Oct 2017)

Fix intermittent behaviour of sending user fields to Premiere. Fix compatibility issue with older servers. Fix key shortcuts on Mac

3.0.3 (15 Sept 2017)

Fix styles for Select Buttons and fix issue configuring chat panels.

3.0.2 (11 Sept 2017)

Import all CatDV clip user-fields as project metadata. Add support for AfterEffects.

3.0.1 (18 Aug 2017)

Improved interface responsiveness when used in small panels. Fixed issues with advanced search and chat panel.

3.0.0 (21 Apr 2017)

All-new 'three column' user interface, based on latest 'CatDV Advanced Web UI', that keeps the nav-tree, clip list and player all visible at the same time, allowing much faster navigation between clips (no more double clicking). Also clip list is navigable using arrow keys and player supports JKL jog shortcut keys, allowing completely keyboard-driven preview of clips. Adds support for clip lists and filters. Markers are now visible on the timeline and colour-coded based on marker category.

2.1.7 (21 Nov 2016)

Update manifest for Premiere 2017 compatibility.

2.1.6 (27 Jun 2016)

Update manifest for Premiere 2015.3 compatibility.

2.1.5 (23 May 2016)

Fix issue with non-ASCII characters in paths or metadata fields failing to import correctly.

2.1.4 (18 Apr 2016)

Fix login issue when switching from workgroup server to enterprise server.

2.1.3 (29 Feb 2016)

Don't load recent clips on start-up. Fix start-up error on clean install. Speed up import process. Fix potential clash with other plugins. Fix issue displaying default panels. Improve initial log in process server type detection.

2.1.2 (8 Feb 2016)

Fix issue when loading simple search form not correctly adapting to different server versions.

2.1.1 (2 Dec 2015)

When running against Server 7 user server-side view definitions

2.1.0 (22 Sept 2015)

Support for Server 7 cross platform path mapping and metadata round tripping.

2.0.11 (28 Aug 2015)

Enable editing CatDV metadata in the plugin.

2.0.10 (23 Jun 2015)

Updated to work with CC 2015 edition.

2.0.9(19 Mar 2015)

Minor update - improves display of errors to user and other minor fixes.

2.0.8 (18 Feb 2015)

Enhanced Adobe Anywhere support so imported files immediately appear in Premiere.

2.0.7 (18 Dec 2014)

Fix install issues caused by new Extension Manager.

2.0.5 (17 Nov 2014)

Add support for importing directly into Adobe Anywhere productions.

2.0.4 (18 Nov 2014)

Updated to work with CC 2014 edition.

2.0.3 (5 Nov 2014)

Minor layout related bug fixes.

2.0.2 (15 Oct 2014)

Import now uses FCP XML so can import subclips and sequences and markers and metadata are preserved.

2.0.0 (5 Aug 2014)

Completely new HTML5 based panel for use with Adobe Creative Cloud release of Premiere.
